

# Simple Product

Adapted by Neilor Tonin, URI  Brazil

**Timelimit: 1**

Make a simple problem that only read two integer values. After that, calculate the product between them and store the result in a variable named **PROD**. Print the result like the sample below. Do not forget to print the end line after the result otherwise you will get *"Presentation Error"*.

## Input

The input file will contain 2 integer numbers.

## Output

Print **PROD** according to the following example, with a blank space before and after the equal signal.

Sample Inputs	Sample Outputs
3 9	PROD = 27
-30 10	PROD = -300
0 9	PROD = 0
